

**Series  
NK**

Duct electric heater

**Series  
NK...U/Un**

Duct electric heater with a heating capacity from 0.6 kW up to 2.4 kW and an integrated temperature controller

**Series  
NK...U**

Duct electric heater with heating capacity from 3.0 kW up to 9.0 kW and an integrated control unit

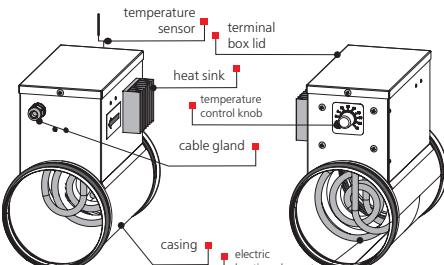

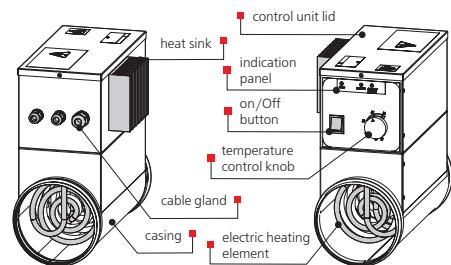

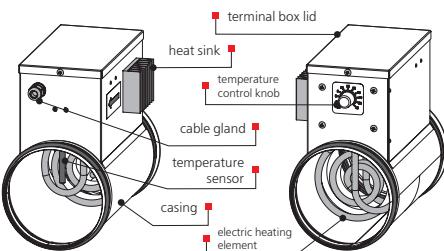

**Applications**

Duct electric heater are designed for supply air heating in round duct ventilating system. The heaters are applied in heating, ventilation and air conditioning systems for various premises.

**Design**

The casing and the terminal box are made of galvanized steel and the heating elements are made of stainless steel. The rubber seals in the casing provide airtight connection to the air ducts.

Each standard size is available with various heating capacity modifications. Installation of the heaters in series increases the heating capacity. All the three phase heaters have star connection.

**NK...Un duct heater design:**

**NK...U with a control unit, heating capacity 3.0 up to 9.0 kW**

**NK...U duct heater design:**

The temperature is set with an integrated temperature control knob or by means of a control signal 0-10V from a connected external control device. The heating temperature in the air duct is proportional to the signal output value.

**Complete set:**

Model	Heating capacity range [kW]	Sensors		Temperature controller [°C]	Max. operation temperature of outlet air flow [°C]	Overheat protection	
		integrated	external			basic overheat protection actuated at +50 °C with automatic reset and emergency overheat protection actuated at +90 °C with manual reset	thermal shutdown at +60 °C with manual reset
NK	0,6...9,0	-	-	-	40	+	-
NK...U	0,6...2,4	+	-	-10...+40	40	-	+
NK...Un	0,6...2,4	-	+	-10...+40	40	-	+
NK...U with control unit	3,0...9,0	+	-	-30...+30	30	+	-

Designation key: \_\_\_\_\_

Series	Connected air duct diameter [mm]	Heater power [kW]	Phase	Options

## ■ Accessories

Model	Pulser-M*	KDT2-M*	KDT2-M1*	KDT2-MK*
NK	+	+	+	+
NK...U/Un from 0.6 up to 2.4 kW	-	-	-	-
NK...U from 3,0 up to 9,0 kW	-	+	+	+

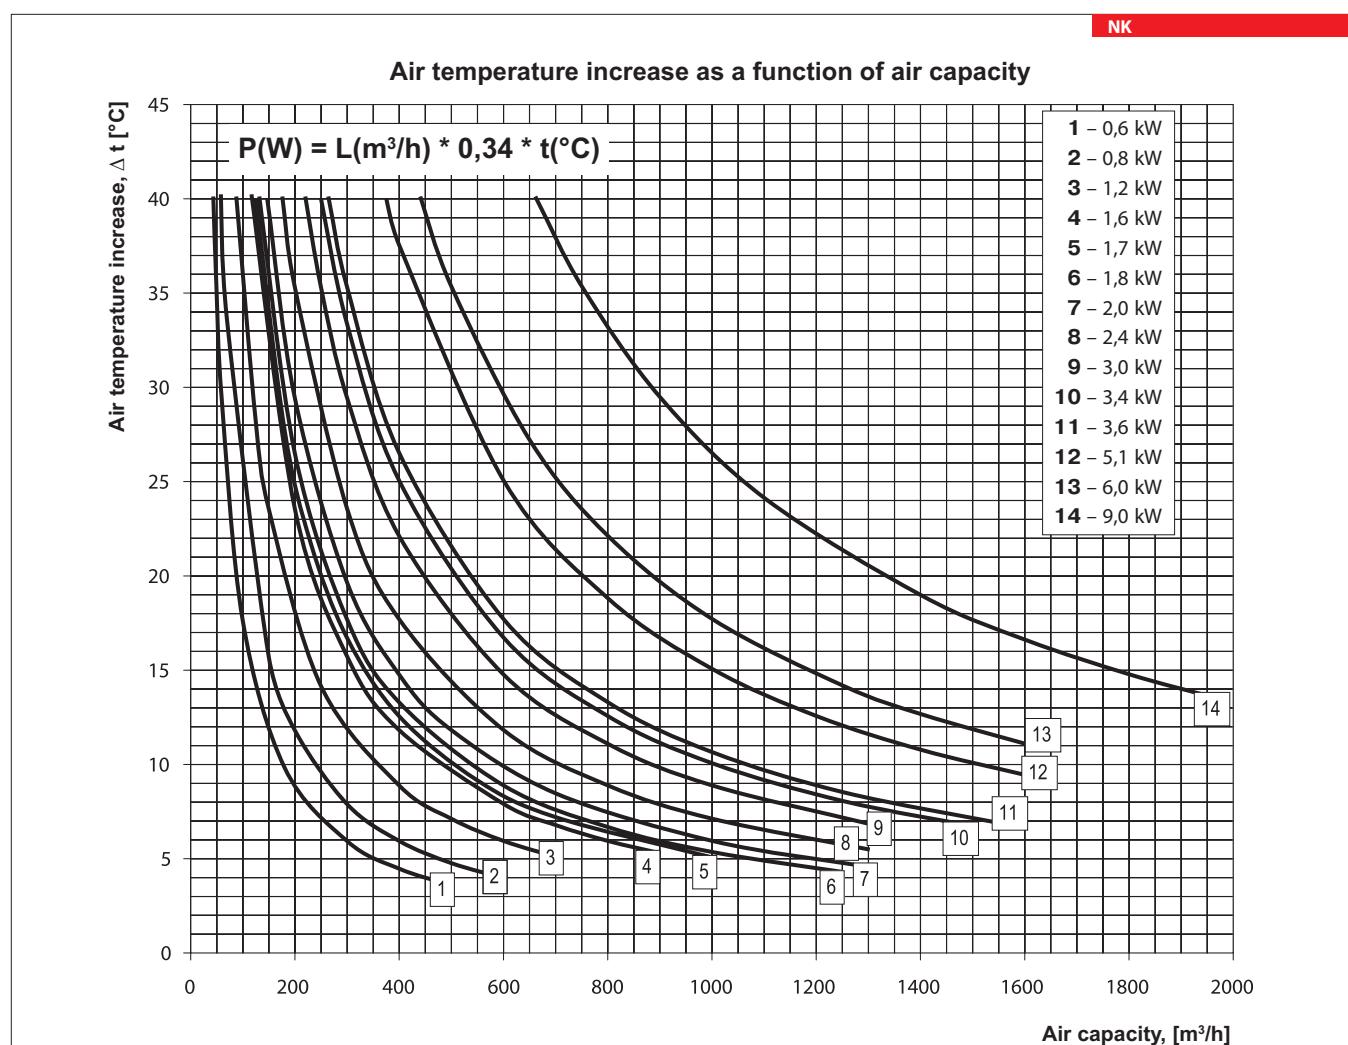

\* - refer to Electric Accessories section

## ■ Mounting

Fixation	Clamp fixing. The fixation place location must be at least two diameters away from any device.
Position	Any mounting position. The terminal box or the control unit must not be directed downwards because of short circuit danger as a result of condensate drainage.
Air flow	The air direction must match the pointer on the heater casing. The air flow must be equal at any point in the heater and must not be below 1.5 m <sup>3</sup> /h .
Filters	Air filter prevents contamination.

### Power supply to the heater must be disabled during the fan standby.

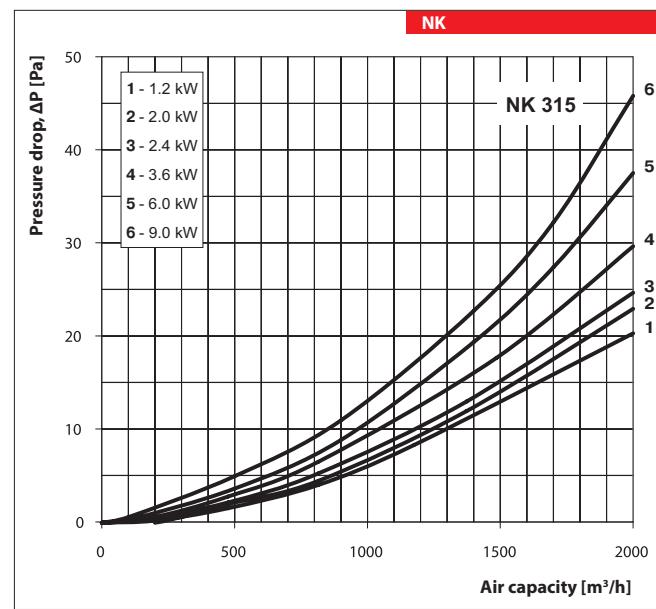

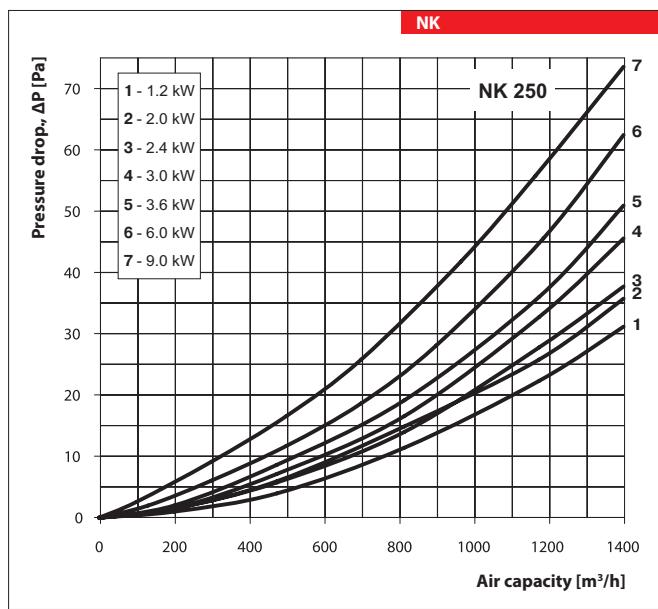

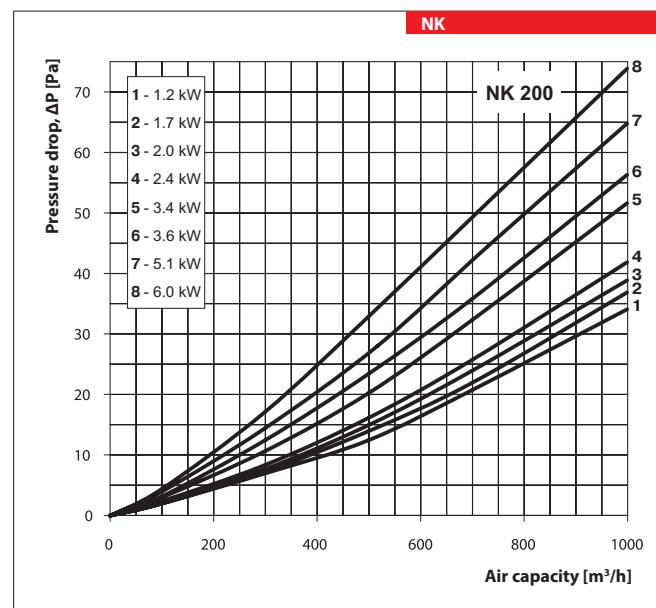

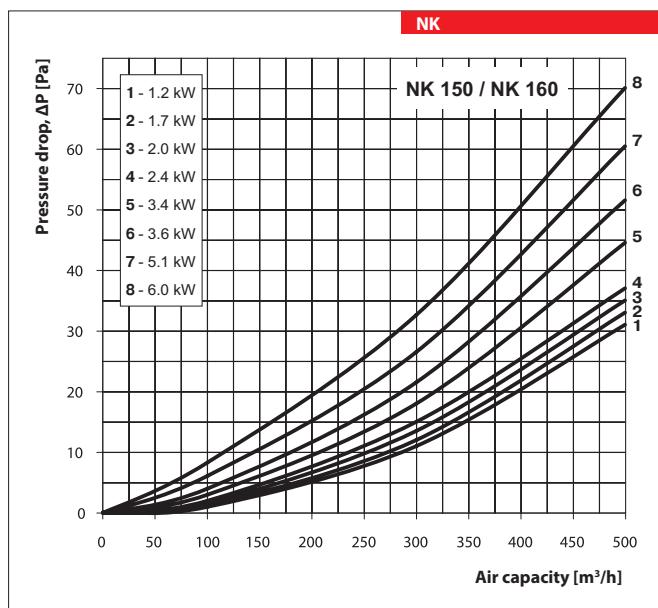

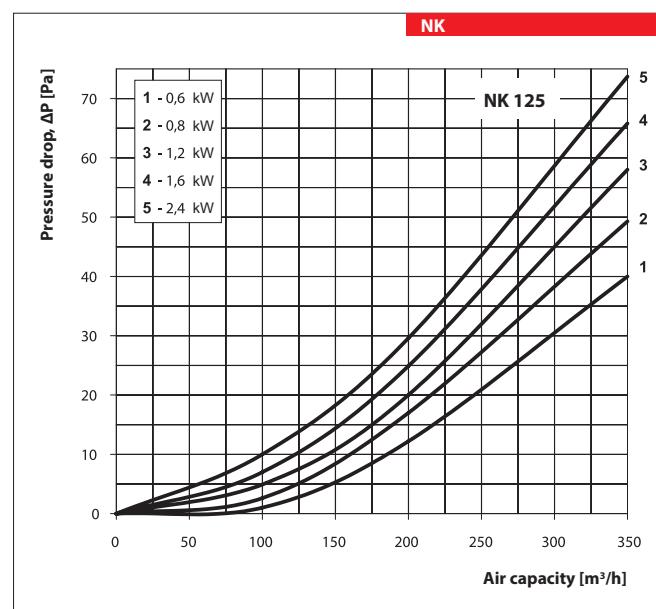

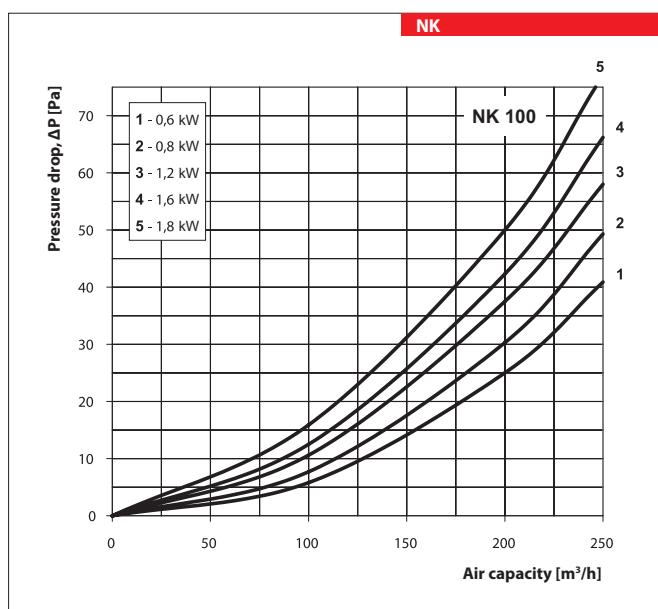

- To ensure the correct and safe heater operation the automation system is recommended to ensure the integrated control and protection:
  - ✓ automatic control of the heat output and air heating temperature
  - ✓ monitoring the filter contamination by means of the pressostat
  - ✓ disabling power supply to the heater in case of supply fan shutdown, decrease of air flow or tripping of the integrated overheating thermostats
  - ✓ shutoff of the ventilation system after cooling of the electric heating elements

## HEATERS

### Technical data:
