

Duct filters

UFI

Description

UFI duct filters are designed for filtering air flowing through round ducts. The filter is provided with a class EU4/G4/ISO COARSE 70% filter element secured with a galvanized steel wire mesh on both sides. The housing is made of a round, galvanized sheet duct piece with the connection ends sealed with gaskets. The dedicated design of the UFI duct filters allows easy replacement of the filter element. The UFI duct filters are designed for installation between the mating ends of two round ducts in the standard diameter range (100-400 mm).

Available materials — Product code examples

UFI-.. - galvanized steel sheet

UFI-K-... - 1.4301 / 304 stainless steel sheet
